

Suppose a ball is dropped from a height of 256 feet.

Its height in feet above the ground t seconds after being dropped is given by the relationship

$s(t) = 256 - 16t^2$. Find the ball's instantaneous velocity at $t = 2$.

time incr	time sec	height ft $s(s)$	height incr	ave veloc	value on our tangent line

Very carefully sketch a line tangent to the graph of s at the point $(2, 192)$.

Estimate the slope of that tangent line that you drew.

What is the actual slope of the line tangent to the graph at $(2, 192)$?

Specify an equation for the graph of that tangent line.
