The aim of the **New Perspectives in South Asian History** is to publish monographs and other writings on early modern, modern and contemporary history, which cover new areas of research, such as the history of medicine and environmental history. It also aims to provide a platform for fresh perspectives on more familiar areas like political and military history. The series, which does not confine itself to India, includes work of an interdisciplinary nature and welcomes historical contributions from sociology, anthropology and cultural studies.

Inventing Global Ecology: Tracking the Biodiversity Ideal in India, 1945–1997

Michael Lewis

NEW

This book constructs the history of conservation-oriented ecology in India, the context in which it has arisen, and the role of U.S. scientists, ideas and funding in this process. The fundamental questions the book raises are: Was India subject to a subtle form of cultural imperialism? Should the science of ecology join the list of U.S. cultural exports? Or did Indian ecologists develop their own agenda, their own science, and their own way of understanding what to save in nature, and how to save it?

Western Medicine and Public Health in Colonial Bombay, 1845–1895

Mridula Ramanna

NEW

The study examines the twin issues of Western medicine and public health in Bombay during the years 1845–1895. The work is the first to explore in detail the complex interrelationship between government, municipality and individual philanthropists over the issues of Western medicine and public health measures.

Forthcoming

Civilising Natures: Race, Resources and Modernity in Colonial South India

Kavita Philip

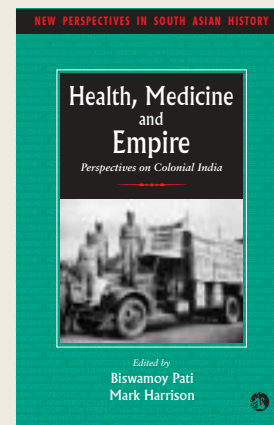

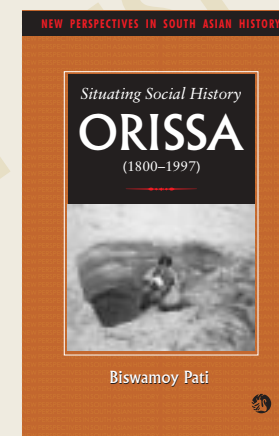

This book combines the theoretical insights of post-colonial historiography and science studies in order to understand how colonial scientific ideologies of modernity functioned both at the level of state policy and the level of everyday experience. It explores the relationship between science/technology and colonial administrative systems in India from 1858 through the 1930s.
